

## Automatic Security Compliance Management Platform

1. Comply with Regulations

2. Reduce of Human Errors

3. ISAC Integration and Incident Response

12 F., No 29-1, Sec 2,

## Automatic Security Compliance Management Platform

ONE MAN SOC

## Five Advantages

### Reduce Manual Operation Errors

Identify real problems and send out alerts and notifications, a series of automated processes to reduce manual action.

### Comply with Regulations

Seamlessly integrate relevant International standard/Government Regulations and actual IT operation to improve their security.

### Global Security Expert's Correlation Subscription

AT & T Cybersecurity experts write the correlation rules on a regular basis.

### The global Largest Threat Intelligence Sharing Platform

From over 140 countries and more than 100K Participants contributing the threat intelligence.

### Professional Security Team

Billows is a certified partner of AT & T Cybersecurity . Our expertise can help to integrate threat intelligence and other security solutions to enhance the security analysis and protection.

## Solution Architecture

The security incident response procedures require a series of cyclic processes such as data collection, event discovery and analysis, security notification and response.

## Solution Features

1. Using the big data technique as the core system to handle the mass amount of raw logs for archive digital signature.
2. The analyzed data can be integrated with various reporting software to visualize the internal data.
3. Integrating and forwarding raw data to various threat analysis platform.
4. Our solution contains various functions such as SIEM, intrusion analysis, behavior monitoring, vulnerability assessment, and an automatic updated threat intelligence database.
5. Integrating AI analysis module to find behavioral events in a large number of user behaviors.
6. Continuous update the correlation rules and attacker characteristics . With the instant correlation rules can significantly find zero-time attack in advance.
7. Built-in vulnerability scanning tool, integrated with continuous vulnerability assessment , help to achieve an accurate and effective information security system.
8. With instant security notification and incident response such as : text messaging , app tracking and STIX format report and ticket system.
9. Integrating with collaborative defense, through blacklist management can automatically trigger the matching IP or domain information and start the defense system to block the attackers.
10. Help clients to seamlessly integrate relevant regulations and actual IT operation in order to improve their cybersecurity system.
